

BLA86 Series

Tenant Care System

In a medical emergency, time is everything. Specifically designed for the monitoring of patients with Epilepsy the BLA86 series Tenant Care System is a multi-room audio and call event monitoring system that automatically identifies possible seizure events to the nursing staff. Staff can either be alerted via a manual switch operated in the room or if an incident occurs whereby the occupant cannot reach the manual call switch, staff are also alerted by an audio event trigger caused by an occupant making unusual noises, calling out or falling or from other sensors. Following an audio trigger, staff can talk back to the room occupant to identify the situation.

- Monitor stations can be portable
- Easily select which rooms to monitor at any station
- Two-way audio communications
- Simultaneous or individual room monitoring
- Audio & Event Alert triggering
- Manual call alarm
- Interface with third-party equipment, bed sensors, doors contacts & PIR's etc.
- Secure room privacy mode
- IP Addressable Networks
- User Adjustable Sensitivity Settings
- Additional Radio Paging Options

B.L. Acoustics Ltd has over 15 years' experience of providing and maintaining specialist audio monitoring systems. Our engineering team can provide full bespoke systems to meet the exacting demands of our clients.
